

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. – 75. (cancelled)

76. (new) A rVab-Pep for use in identifying a small organic molecule which binds to a determinant of a pharmacological target, said target comprising at least a first and second determinant and requiring both of said first and second determinants to be bound to produce a biological activity, said rVab-Pep comprising:

a) an rVab component comprising a variable domain from an immunoglobulin light chain (VL), a constant region from an immunoglobulin light chain (CL), a variable region from an immunoglobulin heavy chain (VH) and a constant region from an immunoglobulin heavy chain (CH1); and

b) a peptide component,

wherein said rVab component binds to a first determinant of said target and said peptide component binds to a second determinant of said target.

77. (new) The rVab-Pep of claim 76 wherein the rVab component comprises

a) a VH region having an amino and carboxy terminus; and

b) a CL region having an amino and carboxy terminus,

wherein the peptide component is bound the amino terminus of the VH.

78. (new) The rVab-Pep of claim 76 wherein the rVab component comprises

- a) a VH region having an amino and carboxy terminus; and
- b) a CL region having an amino and carboxy terminus,

wherein the peptide component is bound the carboxy terminus of the CL.

78. (new) The rVab-Pep of claim 76 wherein the rVab component comprises

- a) a VH region having an amino and carboxy terminus; and
- b) a CL region having an amino and carboxy terminus,

wherein the peptide component is bound to both of the amino terminus of the VH and the carboxy terminus of the CL.
